

Reference Character-2-Video

Reference image

Emma enters the **recreation room** and sees Coco sitting on the sofa. Coco is laughing loudly and talking excitedly on her phone, as if she is having a lively conversation with someone. She says that the story is hilarious, asks the other person to continue, and keeps responding with amused laughter. ...

Execution Artifacts

Thinking

The task requires generating an anime-style video from a script and character reference images. I will use the character-anime-video-gen skill to preserve character consistency and follow the required video-generation workflow...

Tool call

Call character-anime-video-gen skill
Generate a one-minute Japanese anime-style school video from the script and character reference images...

Execution trace

Intermedia audio

Coco: Hahahaha!! What?! This is so funny!!

Generated Scene Images Scene1 Scene2 ...

Shot plan

Shot1: Medium shot. The character relaxes on the sofa, notices the phone beside them, reaches over, picks it up, and checks the glowing screen. ...

Final video

Multi-turn Evaluation

Thinking: Inspect the execution trace to verify process metrics.

Tool: **Bash, Read and Error analysis**

Evidence:

Skill: Character-anime-video-gen skill

Step: Plan and follow the guide

Output: 57.82s and 1080p

Tool: 37/37 successful ...

Round1: Trace Inspection

Thinking: The character is consistent and matches the reference image, but the video contains multiple scene changes despite the prompt specifying a single scene.

Judging:

✗ PR: Scene changes violate the requirement.

✓ VC: Character remains visually consistent...

✓ RF: Character matches reference.

Round5: Visual Judge

Thinking: I will inspect the audio track for music consistency and missing audio.

Tool: **Audio understanding**

Listen: 0:33 / 0:57

Evidence:

BGM: (0-10s): piano music (10-20s): No voice...

Coco Laugae saying (0-5s): Hahahaha!! What?! ...

Round6: Audio understanding

Thinking: The trace has been reviewed, and no execution error is observed.

Judging:

✓ EE: All tool call successes, return pass

✓ CP: Generate the final video

✓ SF: Use the correct composition skill

✓ PL: Generate a plan and follow the plan

✓ IP: Using visual understanding

✓ RAU: Using the user offer's asset

Round2: Trace judge

Thinking: I will inspect the representative frames to check whether the character and scene remain consistent across shots.

Tool: **Visual understanding**

Observe

Evidence:

Character: Coco, laughing, phone in hand ...

Scene: Recreation room, sofa, phone call ...

Round4: Visual understanding

Thinking: The voice identity is consistent, but the background music changes across segments, and one shot has no audio.

Judging:

✗ AC: BGM changes from soft piano to silence

✗ AVC: There is missing audio in the videos

Round7: Audio judge

Thinking: I should extract multimodal evidence for final-video evaluation, including metadata, audio, ASR transcripts, and representative key frames.

Tool: **Audio-vocal-separate, Extract-video-frame Video-shot-split, ASR, Grid generate**

Evidence:

Extracted audio

(0-5s): Hahahaha!! What?! This is so funny!!
(7-9s): Really? Tell me more ...

ASR Transcript

Key frame grid 1

Key frame grid 2

Round3: Video metadata extraction

Thinking: I have reviewed the full video and checked whether the story remains coherent across shots.

Judging:

✓ PLC is satisfied because the scene progression is clear and logically connected.

Round8: General judge
